Report Prepared by:

Division of Health Data and Statistical Research
Mary Lou Eastman, Director

FOREWORD

A Nebraska statute requires the filing of certificates for the births, deaths, fetal deaths, marriages and dissolution of marriages, occurring in Nebraska, with the Bureau of Vital Statistics. However, the statistical tabulations include the records of the events occurring to Nebraskans in other states in order to furnish resident statistics.

On February 15, 1905, a law was passed providing for the central depository of the records of the births and deaths occurring in Nebraska. In 1909, the marriages and divorces were included. The total of the records accumulated through 1982 is 4,712,294. Approximately 63,000 additional certificates are filed each year and over 100,000 certified copies are issued. This illustrates the dual use of the records, individually and statistically.

The records filed for 1982 events were fewer in all categories with the exception of fetal deaths. Nevertheless, births averaged one every 19.5 minutes, deaths every 36 minutes, marriages every 36.6 minutes and dissolutions every hour and 23 minutes.

In 1982, there were 83 persons who were over 100 years of age at the time of death. Of these, 59 were females and 24 were males. The oldest was a woman who died at age 106. The average age at the time of death for females was 75.3 years, for males 69.1 and for both 72.0. This is an encouraging set of figures.

Of the 26,954 resident births, 99.56% were in hospitals. Of the 14,567 resident deaths, the percentage of deaths in hospitals was 62.5%.

To produce reliable statistics, the data on the source documents must be dependable, complete, accurate and filed on time.

This collection of records and subsequent statistics have been accomplished through the excellent cooperation of all those persons completing and filing certificates.

Freda Theis, Director
Bureau of Vital Statistics

INTRODUCTION

The information presented in this report is drawn from the vital records of the State of Nebraska. The primary period covered is calendar year 1982, but selected data from previous years are also included. Data from 1982 records received after April 1, 1983 by the Bureau of Vital Statistics are not included in the tabulations in this report. However, the number of such records is minimal and their statistical effect negligible.

The congenital anomaly data presented in the report are taken from the Nebraska Birth Defects Registry, with the exception of the death data. Information for the Registry is provided by reporting personnel in approximately 100 Nebraska hospitals.

The state population figure used in the calculation of rates is 1,586,000, the 1982 estimate published by the United States Bureau of the Census. County, city and balance of county populations used are Health Department estimates. United States vital event data, presented for comparative purposes, are provisional and are from the National Center for Health Statistics except as otherwise specified.

Characteristics of the population, such as its size and its age structure, can bear a great influence on vital statistics data. Only 30 of the 93 Nebraska counties, according to the 1980 Census, had populations over 10,000 along with only 12 cities. Nine counties had less than 1,000 residents. In any area with a population under 10,000, wide variations in numbers or rates of events can appear from year to year, and no single year may be truly representative of the population. Counties with a high proportion of young people will show relatively higher birth rates and lower death rates than counties with greater numbers of older residents.

Information for towns having populations of 2,500 or more are included in this report, but information is available for towns where populations are 1,000 or more persons.

NEBRASKA BIRTHS, DEATHS, MARRIAGES AND DIVORCES

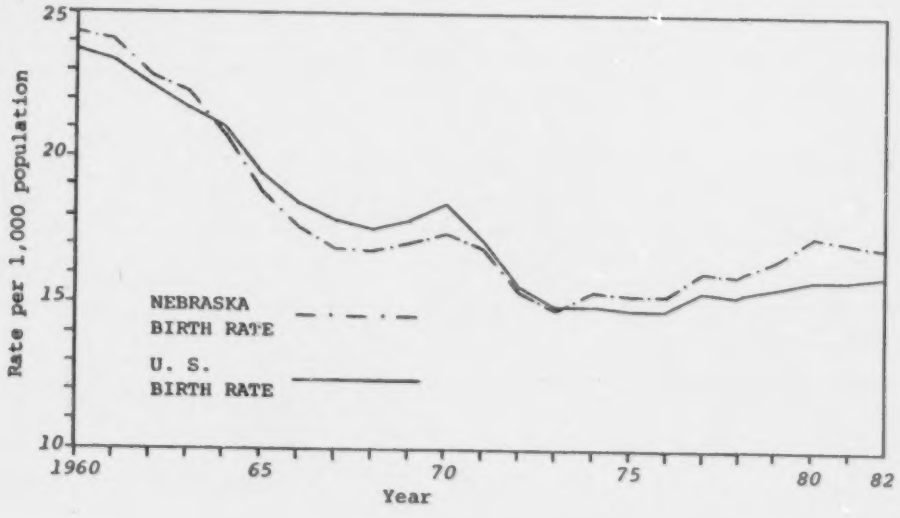
BIRTH OVERVIEW

Nebraska resident live births showed a decrease for the second year. The decline was just 0.8% from 27,164 in 1981 to 26,954 in 1982, but decline will probably continue through the end of the century. Nationally, fertility is increasing among women over 30 and particularly those 30-34 and the number of women in the group is increasing. Specific population data is not available for Nebraska to determine exactly what is happening here, but it is likely that the pattern is similar to the United States. However, it is unlikely that the increases in the older age groups will offset the declining numbers of women and fertility in the younger age groups. The estimated 1982 fertility rate for women 18-44 is 81.0 per 1,000. This figure may be compared to the figure of 70.5 for the United States which was published in Current Population Reports. (Fertility rates usually have a population base of women 15-44 years of age.)

The birth rate dropped from 17.2 per 1,000 population in 1981 to 17.0 in 1982. The United States rate increased in 1982 to 16.0 from 15.9 in 1981. A comparison of Nebraska and United States rates for a twenty-two year period is shown in the graph below. Though Nebraska's rates have been both higher and lower than the national rates, their trends are similar.



Rates for counties within the State ranged from a high of 25.5 in Thurston County to a low of 9.1 in Pawnee County. Rates for towns over 2,500 population ranged from a high in Alliance of 23.f to a low in David City of 11.2.

Most Nebraska births continue to occur in hospitals and are attended by physicians. In 1982 there were 109 (0.4%) births not reported as occurring in hospitals. The percentage of births not reported as physician attended increased to 1.2%. This percentage, while small, has quadrupled since 1978.

The educational level of mothers and fathers for reported cases is shown in the table below. (A higher proportion is unknown for fathers than mothers because this is generally not shown on certificates of out-of-wedlock births, but trends should not be significantly affected.)

	MOTHER					FATHER				
EDUCATION	1970	1975	1980	1981	1982	1970	1975	1980	1981	1982
≥ 12 yrs.	81.6%	83.7	86.4	86.9	87.4	84.7%	88.7	90.6	91.5	91.4
≥ 16 yrs.	9.6%	14.0	16.1	16.9	17.2	18.6%	23.3	24.3	24.7	24.5

White births continued to account for a decreasing percentage of the state's births. In 1982, 89.7% of births were white compared to 90.0%, 90.2%, and 92.5% in 1981, 1980, and 1975 respectively. Slightly over 5% of Nebraska's population is non-white. Douglas County has the largest share of the non-white births, 50.8%, followed by Lancaster and Sarpy with 11.7% and 8.8% respectively.

For the first time since 1925 and probably the first time ever, a set of quadruplets were born in Nebraska. There were also an unusually high number of sets of triplets, 8, this year. In 1968 and 1954 there were 7 sets of triplets born; in 1975 and 1965 there were no triplets born, but three is about average.

Out-of-wedlock births continued to climb upward. There was a 5.2% increase in number and a 6.1% increase in rate. The number and rate of all births decreased between 1982 and 1981 by 0.8% and 1.2% respectively. The percentage of out-of-wedlock births accounted for by each race and the percentage of births for each race which were out-of-wedlock are shown in the following table.

	PERCENT OF OUT-OF-WEDLOCK BY RACE		PERCENT OF RACE OUT-OF-WEDLOCK	
	1982	1981	1982	1981
White	68.0	67.9	9.6	9.1
Black	22.6	22.9	57.5	57.2
Indian	5.1	4.1	53.5	45.7
Mexican	4.0	4.6	17.6	17.6
All Other	0.4	0.5	4.0	5.7

The distribution of out-of-wedlock births by age group shows that teenagers continue to account for the largest share of these births. However, the difference between teenagers and 20-24 years olds is now less than three percentage points. The percentage distributions by age group of mother for out-of-wedlock births and all births for five years are in the following tables.

OUT-OF-WEDLOCK BIRTHS

AGE	1978	1979	1980	1981	1982
Under 20	47.2	43.5	45.6	42.1	40.0
20 - 24	35.2	38.1	36.1	39.0	37.3
25 - 29	11.8	12.5	12.3	13.0	15.1
30 and over	5.8	5.9	5.9	5.8	7.6

ALL BIRTHS

AGE	1978	1979	1980	1981	1982
Under 20	12.4	11.6	12.1	11.3	10.5
20 - 24	35.1	34.9	34.8	34.5	33.8
25 - 29	34.8	35.2	34.4	34.5	34.8
30 and over	17.6	18.3	18.8	19.8	21.0

A combination of changes in number of persons in the age groups and fertility levels are causing the changes in the distributions in the tables above. The next two tables give evidence that the effects of delayed child bearing are leveling off.

AVERAGE AGE OF MOTHER

	1970	1975	1980	1981	1982
1st born	21.4	22.1	22.7	22.9	22.9
2nd born	24.2	24.7	25.4	25.6	25.7
3rd born	26.8	27.3	27.6	27.7	27.7

MOTHER'S AGE RANGE FOR BIRTH ORDER AVERAGES BY YEAR

	1.00 - 1.99	2.00 - 2.99	3.00 - 3.99	4.00 - 4.99	5.00+
1970	13 - 23	24 - 27	28 - 31	32 - 36	37+
1975	12 - 25	26 - 31	32 - 34	35 - 38	39+
1980	13 - 25	26 - 32	33 - 37	38 - 41	42+
1981	13 - 25	26 - 33	34 - 37	38 - 40	41+
1982	13 - 25	26 - 33	34 - 38	39 - 40	41+

The average number of pregnancies per woman having a live born child in 1982 remained at 2.3. The average number of live born children per woman having a live born child in 1982 increased slightly to 2.1 from 2.0 in 1981.

Low birth weights occurred in 5.5% of the births, unchanged from 1981. Births of ten or more pounds occurred 2.0% of the time, up from 1.9% in 1981. Prenatal care began in the first trimester of pregnancy in 78.9% of the births, down slightly from 79.0% in 1981. The percent of mothers who had at least ten prenatal visits rose again slightly to 65.4% from 64.8% in 1981.

Congenital anomalies were reported to the Birth Defects Registry on 694 resident 1982 Nebraska births. This total represents 2.6% of the 27,187 live births and fetal deaths, equal to the final percentage for 1981.

A much higher proportion of the anomaly cases were of low birth weight than the overall live births; 20.9% as compared to 5.5%. Twenty-eight cases were stillborn at 20 or more weeks of gestation, representing 12.0% of the fetal deaths. A single defect was reported on 528 cases, two on 102 cases, three on 30 cases, four on a dozen cases, and five or more anomalies were noted on 21 cases.

Nebraska births in 1982 occurred at a rate of one every 19.5 minutes, or 73.8 per day. More births occurred in July (2,426) than in any other month while the fewest occurred in December (2,127).

Jennifer remained the most popular name for girls. Michael returned as the most popular name for boys.

Out-of-State: A Nebraska resident giving birth or dying outside of Nebraska.

Non-Resident: A non-Nebraska resident giving birth or dying in Nebraska.

DEATH OVERVIEW

A very small decrease occurred in the number of deaths in 1981, 0.1%, but the crude rate remained at 9.2 per 1,000 estimated population. With the exception of 1979, when the rate dropped to 9.0, the rate has been the same since 1977. The United States rate dropped for a second year to 8.6 from 8.7 in 1981.

Within the state, county death rates ranged from a high of 16.6 in Franklin County to a low of 3.5 in Loup and Sarpy Counties. Rates for towns over 2,500 population ranged from a high of 20.1 in Broken Bow to a low of 2.3 in LaVista. The low position has been held by LaVista for several years, probably because of its young population.

There were two changes in the ten leading causes of death between 1981 and 1982. One change was that of positions. Chronic Lung Disease moved up to sixth place and Atherosclerosis moved down to seventh. Tenth place was taken over by Nephritis and Nephrosis. Cirrhosis and Chronic Liver Disease did decrease slightly, but primarily it was replaced because of the increase in Nephritis and Nephrosis. Though numbers and categories changed, the ten leading causes of death continued to account for 84.5% of all deaths.

The leading cause of death, Heart Disease, increased in number by 1.6%. The rate also increased for the third year in a row. Nationally, the rate decreased for the second year to a new low.

Cancer, the second most frequent cause of death, increased slightly both in number and rate. The rate is below the national rate for the first time since 1976. For Bronchus and Lung, the most common site, there was an 8.2% decrease after an 11.3% increase last year. The decrease was primarily for males as the increase had been last year. The second most frequent site, the Large Intestine, showed no change and Other Digestive Organs decreased, but even with this decrease third place was retained because Breast also declined nicely. Leukemia stayed about the same, but

there was a 30.2% increase in other Lymphatic and Hematopoietic Tissues. Death rates per 100,000 estimated population for heart disease and cancer in Nebraska and the United States are shown in the following table.

	HEART DISEASE		CANCER	
YEAR	NEBRASKA	UNITED STATES	NEBRASKA	UNITED STATES
1973	368.3	360.8	172.4	167.3
1974	370.4	351.6	172.3	169.4
1975	356.7	338.6	179.1	174.4
1976	352.9	338.5	169.9	174.9
1977	337.9	331.6	182.0	178.4
1978	348.4	333.0	188.2	181.9
1979	348.2	330.2	184.0	183.9
1980	349.8	335.2	188.0	186.3
1981	357.5	329.5	187.5	184.3
1982	361.0	326.9	187.6	188.6

The third leading cause of death, Cerebrovascular Disease, reversed its downward trend by showing a small, 1.5%, increase giving a rate of 85.9. The national rate continued to decline to 68.8 in 1982.

Accidents, the fourth leading cause of death, decreased by 16.6%. Motor Vehicle Accidents were primarily responsible for the decline. The number of Motor Vehicle Accidental deaths has not been lower since 1948, though the number was equalled in 1960.

The leading cause of death for males under 40 and females under 35 is Accidents. At age 40, Heart Disease takes the lead for males. For females, Cancer is the top cause of death for ages 35 through 69, then Heart Disease takes the lead.

The average age at time of death continues to rise. Overall, the average age is 72.0 years, up from 71.5 years in 1981. For a change, the increase was all due to men. The female average dropped slightly from 75.4 in 1981 to 75.3 in 1982 while the male average rose from 68.0 to 69.1. The oldest Nebraskan dying in 1982 was a woman of age 106. A total of 83 persons, 24 males and 59 females, died at the age of 100 or more years. Ten years ago there were only 39 persons who died at the age of 100 or more years.

MATERNAL, INFANT, AND FETAL DEATHS

There was only one Nebraska resident maternal death in 1982, down one from 1981. This death was attributed to toxemia. The maternal death rate decreased to 3.7 per 100,000 live births.

Infant deaths increased by one over 1981 and the rate inched up to 10.0 per 1,000 live births, but this is not surprising after the dramatic drop which occurred last year. The national rate continued to decline, but is still above Nebraska's rate. A comparison of the state and national rates is shown in the table below.

YEAR	NEBRASKA NUMBER	NEBRASKA RATE	UNITED STATES RATE
1978	326	13.0	13.6
1979	304	11.6	13.0
1980	314	11.5	12.5
1981	268	9.9	11.7
1982	269	10.0	11.2

The infant death rate for whites increased to 9.6 from 9.2, while the nonwhite rate continued to drop from 15.5 to 13.7. Neonatal deaths, those occurring in the first 27 days of life, showed a marked increase, 11.5%, while older infant deaths decreased. The neonatal death rate increased to 6.8, but is still lower than the 1980 rate of 7.5 per 1,000 live births.

Fetal deaths also increased, 6.9%, and are again equal to the number in 1980 after a decline in 1981.

MARRIAGE AND DIVORCE OVERVIEW

Nebraska marriages decreased slightly both in number and rate. The number declined by only thirteen, 0.1%, and the rate dropped to 9.0 per 1,000 estimated population from 9.1 in 1981. The national rate increased to 10.8 from 10.6 in 1981.

Most marriage data presented are based on the number of marriages occurring in a county or state. This is because it is usually the best information available. In this report we are able to include rates calculated in the traditional manner and rates based on the number of residents married regardless of where the marriage occurred. The resident data is not 100% complete because not every state exchanges data with us. However, we feel it is complete enough to be useful. In 1982, the resident county marriage rates varied from a low of 6.0 per 1,000 population in Sioux County to a high of 23.6 in Wheeler County. The state resident marriage rate decreased to 17.7 from 17.9 in 1980.

Twenty was the most frequently reported age of brides. For grooms, the most frequently reported age was 22. These are unchanged from 1981.

The percent of marriages which were the first for both bride and groom continued to decrease to 61.2% of all marriages, but the pace of the decline slowed from last year. Also, marriages which were first for neither bride nor groom increased to 19.0% from 18.6% in 1981. The following table shows the last five years.

YEAR	FIRST MARRIAGE FOR BOTH PARTNERS	PERCENT OF ALL MARRIAGES
1978	8,657	63.1
1979	8,991	63.9
1980	9,042	63.5
1981	8,894	61.9
1982	8,777	61.2

Residents of several foreign countries and all states except Delaware were married in Nebraska in 1982. Both bride and groom were Nebraska residents in 88.4% of the marriages; neither were residents in 5.0%.

Marriage ceremonies tend to be religious, 80.0%, rather than civil. In marriages

which were first marriages for both bride and groom, the percent of religious ceremonies was higher at 86.5%. In both cases the percentages are declining, with first marriages declining more rapidly than all marriages. As usual, June was the most popular month for marriage with 1,894 taking place and January was the least popular with 748.

Nebraska divorces decreased by 6.1% to 6,357. The decline was the largest since 1948. The rate also decreased to 4.0 per 1,000 estimated population. The United States rate also declined to 5.1 from 5.3.

The most frequent age of those divorced in 1982 was 25 for both men and women. This is the same for women as last year and a return to what it had been for men before last year.

More marriages continue to end after a duration of two years than any other length of time, with 38.2% of the divorces occurring prior to five years of marriage. Couples married from five to nine years account for 26.3% of the divorces and those married ten or more years 35.5%. There is some movement occurring toward the longer duration representing a higher percentage of the total. This probably reflects a population shift which is putting more couples at risk in the higher duration group.

Of all divorces, 66.2% were ending first marriages for both partners, continuing a downward trend. The first marriage was ending for neither partner in 16.0% of divorces continuing an upward trend.

Data on settlements show that in 89.6% of the divorces some type of settlement was granted, increasing slightly after a decline last year. Child support was granted in 81.0% of the divorces in which children under 18 were affected. Children were affected in 63.0% of the divorces, down from 64.1% in 1981.

POPULATION OVERVIEW

The estimated population for Nebraska for 1982 is 1,586,000, a 0.6% increase over the 1981 estimate of 1,577,000.

The table below shows natural increase (the excess of births over deaths) and net migration for Nebraska for each decade since 1930 and the beginning of the current decade.

DECADE	NATURAL INCREASE	NET MIGRATION
1930-1940	112,471	-174,600
1940-1950	139,270	-129,594
1950-1960	201,518	-115,698
1960-1970	147,200	- 73,197
1970-1980	97,420	- 12,928
1980-1982	24,971	- 8,796

Nebraska has consistently experienced out-migration over the period shown, but it had been decreasing. If the population estimates hold true, it appears that out-migration may pick up again during the 80's.

Population projections for Nebraska are available from the Bureau of Business Research, University of Nebraska, Lincoln. The 1982 state population estimate was made by the United States Bureau of the Census. County and town population estimates were made by the Health Department for the purposes of this report. County population estimates for 1982 should be available from either the Bureau of Business Research or the U.S. Bureau of the Census at a later date.

The population pyramid on the adjacent page shows the age distribution by sex of Nebraska's 1980 population. The "baby boom" group moving up and the increase in the elderly group are making the name of this type of display less appropriate, but you can see easily what is happening to the distribution.

DEFINITIONS

BIRTHS

BIRTH ORDER - The number of live born children including the current birth.

BIRTH RATE - The number of live births per 1,000 population.

FERTILITY RATE - The number of live births per 1,000 females 15-44 years of age.

LENGTH OF PREGNANCY - The duration of gestation, in completed weeks, as calculated from the first day of the last normal menses to the date of birth.

LIVE BIRTH - The complete expulsion or extraction of a product of conception from its mother, irrespective of the period of gestation, which, after such separation breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached and is reportable.

LOW-WEIGHT BIRTH - A live born infant weighing 5½ pounds or less.

OUT-OF-WEDLOCK BIRTH RATE - The number of out-of-wedlock births per 1,000 live births.

SEX RATIO - The number of male births for each 1,000 female births.

DEATHS

DEATH RATE - The number of deaths from all causes per 1,000 population.

FETAL DEATH - Death prior to the complete expulsion or extraction of a product of conception from its mother, irrespective of the duration of pregnancy. Until the pregnancy has reached 20 weeks duration, it is not required that such a death be reported.

FETAL DEATH RATE - The number of fetal deaths per 1,000 live births.

INFANT DEATH - Death of a person under age one year.

INFANT DEATH RATE - The number of infant deaths per 1,000 live births.

MATERNAL DEATH - Death attributable to delivery or the complications of pregnancy, childbirth or the puerperium.

MATERNAL DEATH RATE - The number of maternal deaths per 100,000 live births.

NEONATAL DEATH - Death of a person under 28 days of age.

NEONATAL DEATH RATE - The number of neonatal deaths per 1,000 live births.

PERINATAL DEATHS - Fetal deaths plus neonatal deaths.

PERINATAL DEATH RATE - The number of perinatal deaths per 1,000 live births plus fetal deaths.

RESIDENCE - A person's usual place of abode. This means, in general, the place where one lives and sleeps most of the time. However, when usual residence is in a nursing home or other institution, residence is considered the place where the person lived prior to admission to the institution.

OCCURRENCE - The location in which an event takes place irrespective of the usual residence of persons involved.
